

Financial Modeling Course (Foundation)

30-hour Classroom Program

Cians Academy

What is Financial Modeling

Financial modeling is now one of the most indispensable skills to make a career in the fiercely competitive finance industry. It refers to the process of creating a model using MS- Excel to project the financial statements for a company

Financial modeling requires a mix of fundamental knowledge of Financial Accounting and Equity Valuation, as well as working knowledge of MS - Excel

Applications of Financial Modeling

- **Equity Research**: Equity analysts spend a considerable amount of time building a financial model for the company they are about to give a buy/sell recommendation on
- **Investment Banking**: Investments bankers need to arrive at a valuation of a target company based on which they pitch buyers/sellers.
- **Credit Research**: Credit rating agencies like Crisil, use sophisticated financial models to evaluate credit quality of companies debt issues
- **Project Finance**: Sophisticated financial models are built in project finance, when deciding whether to do a specific capex in a project e.g. building a new hotel
- **Portfolio Investments**: It is critical to evaluate equity investments in your portfolio, when you are looking to seek higher returns as compared to debt. Financial Modeling knowledge goes a long way in helping you understand the finer points of company's financial statements . This will help in making sound investments in companies with growth potential (Wrong investments in equity can cause capital destruction)

Why Cians Academy?

Value Proposition

- ✓ The curriculum has been designed in collaboration with industry veterans and the senior management of Cians Analytics, with decades of top-class experience in the Finance industry
- ✓ The course structure has been designed with an emphasis on the skills that are required for building comprehensive financial models
- ✓ Our pedagogy leans towards real-world case studies that cover the Private Equity, Equity Research and Investment Banking verticals
- ✓ Our trainers have years of training and industry experience

Theory is important but its our practical experience that sets us apart

Skills We Aim to Impart

Become proficient with excel functions to build models

Analyse and interpret financial statements like an Investment Banking Analyst

Understand the broad modeling requirements of a private equity analyst

Learn to appraise project feasibility like a corporate finance analyst

Estimate future company share prices in the manner of an equity analyst

Perform data analytics to identify trends and themes in a data set

Why Financial Modeling ?

Financial institutions constantly utilize excel models to assess the potential of any deal or returns from a project.

There is a firm dependence on financial modeling to estimate the future growth of companies, calculate potential valuation, and identify any trends that may impact investment decisions.

*Financial Modeling is a
Black Box of the Finance
Industry...*

*We will help Demystify it
for you*

Our Approach Towards Financial Modeling

Having liaised and worked with prominent global financial institutions, we believe financial modeling is a three-legged stool based on:

Indicative Applications of Modeling (1/3)

Consultants/Analysts Use Models to Project Future Sales and Expenses of Companies

Real World Business Problem

A consultant wants to evaluate an agriculture business with different operating segments

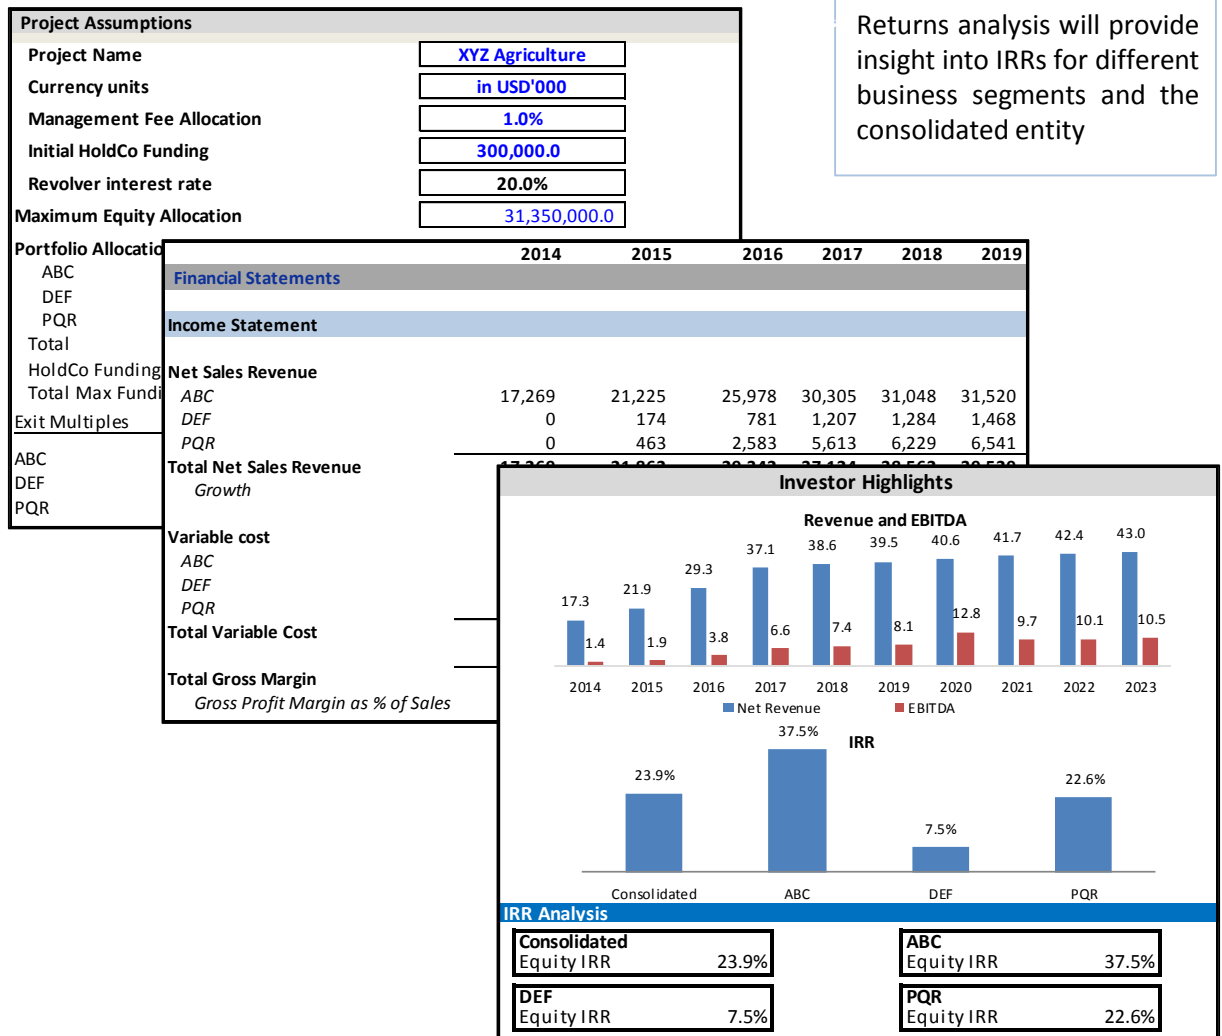

Solution

Create detailed consolidated financials by projecting different business segments, including valuation and returns analysis

Outcome

Consolidated financials will help project performances for different business segments

Returns analysis will provide insight into IRRs for different business segments and the consolidated entity

Indicative Applications of Modeling (2/3)

Valuation Advisors Use Models for Valuation Projections

Real World Business Problem

A Valuation advisor wants to evaluate an investment opportunity in a consumer sector business

Solution

A detailed business model with DCF, sensitivity analysis and football field analysis

Outcome

A DCF analysis will provide the intrinsic value of the business while the sensitivity analysis will provide a range of valuations under different assumption scenarios

Return Assumptions	
Investment date	Jan-14
Management Equity Ownership	15.0%

About the Course

Foundation Modeling Course

The 10-day program will enable students to build financial models from scratch and use them for solving practical business problems. The classroom program intends to provide hands-on experience to the candidates. This course is designed for:

- ✓ cracking interviews
- ✓ getting acquainted with 3-step financial statements
- ✓ building revenue and cost projections
- ✓ Creating Equity Models like experts

Who should sign up?

- ✓ CA, MBA, and CFA aspirants/candidates who want to pursue a career in finance
- ✓ Undergraduates who want to bridge the gap between theory and practice, and learn about the work streams of a research team
- ✓ Working professionals who need to build or read end-to-end financial models to make recommendations or write reports
- ✓ Professionals looking at a career switch to finance or students who want to get a head start before taking up a job

What you get...

- Candidates will be provided a pre-course handbook that has readymade notes on relevant accounting and valuation concepts
- Step-by-step Excel templates for practice following the sessions and solved Excel sheets
- A robust valuation model of a listed company,
- Completion Certificate

Pedagogy

Duration:

- 5-day classroom training spread over 30 hours

Fees

- **Program fee:** INR 15,000 plus service tax

Course Structure

Day 1 - Overview of Accounting & Valuation and Excel

- Overview of Income statement, balance sheet and cash flow statement
- Overview of accounting adjustments like working capital changes, deferred revenue, DTA/DTL, etc., and their impact on the three financial statements
- Importance of equity valuation
- Techniques of equity valuation
- Basic layout and shortcuts of MS Excel

Day 2 - Basic MS Excel

- **Basic layout and shortcuts of MS Excel**
- **Basic and Conditional Formatting**
- **Basic Charting – Line & Bar charts, pie charts, combo charts etc.**
- **Pivot tables**
- **More than 30 Basic MS Excel functions like Logical functions, Reference functions etc which are widely used in client work**
- **Goal seek and revolver**

Day 3 - Equity Model

- Overview of Listed company
- Data sourcing and creating historical financial statements
- Building a bottom-up revenue model
- Cost assumptions
- Building assets and debt schedule

Day 4 - Equity Model

- Projecting interest expense and dealing with the circular referencing error
- Revolver adjustment
- Interlink age of debt and asset schedules with the projected financial statements
- Completing the operating model

Day 5 - Equity Model

- Performing DCF analyses using the FCFF approach
- Performing Sensitivity analyses (single- and two-variable tables)
- Performing ratio analyses
- Overview of Trading Comparables and Transaction Comparables for relative valuation
- Football field analysis

Team

ANMOL BHANDARI, CEO & Co-founder

- Investment Director & Head of Business Development, Gaia Renewable Capital
- Director, Business Development, Copal Partners
- Hedge Fund Strategies Group, Goldman Sachs
- Harvard Business School, OPM 45
